SEP 12 1989

Mr. Gary J. Pendergras  
Manager, Environmental Projects  
Post Office Box 1246  
Springfield, Missouri 65801

Mr. Pendergras:

The U.S. Environmental Protection Agency (EPA) has received your letter of September 1, 1989, which addresses Agency concerns regarding ground water monitoring and potential remediation at the Syntex Verona facility. Syntex has recognized, in this letter, the potential need for ground water remediation under a second operable unit and modification of the proposed ground water sampling regimen should conditions warrant. The Agency by notice of this letter fully approves the Syntex Verona Implementation Plan and Addenda (IP).

As provided in your letter, the Agency will continue to work closely with Syntex during the conduct of the planned activities and subsequent review of analytical data. The Agency will be providing personnel to oversee portions of the well drilling and equipment decontamination activities. The Agency should be provided advance notice, two week minimum if possible, prior to initiation of these activities. In addition, the Agency requests all analytical data or a summary of analytical data results as soon as possible after receipt by Syntex. The Agency will be collecting split samples as part of the oversight activity and will likewise share these results.

As per our phone conversation on September 8, 1989, you advised me that the well drilling activities would begin on September 18. The EPA oversight personnel will be onsite mid-morning unless notified otherwise.

Should you have any questions regarding this letter, contact me at (913) 236-2856.

Sincerely yours,

Glenn M. Curtis
